

HEALTHCARE NEWS

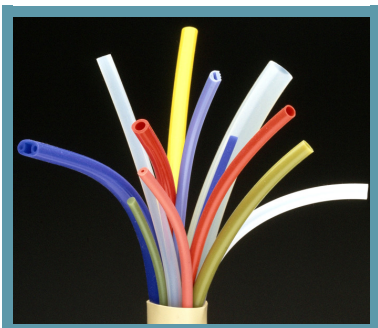

Robin Industries is now certified to ISO 13485 standards.

Our Elasto-Tec Healthcare manufacturing facility is undergoing an expansion and renovation that will enable increased capabilities by the beginning of year 2011.

We have also expanded our LIM capabilities to offer increased short and medium runs in addition to high volume operations.

We are now able to offer extrusions for medical applications, as well as assemblies.

GOVERNMENT/DEFENSE NEWS

Robin has won several notable government contracts recently and is on the QPL (Qualified Parts List) as an approved government supplier for rubber components.

As specialists in the formulation of high performance rubber compounds and with significant experience in rubber to metal bonding, we have been able to provide superior performing track pads and bushings for most major tracked vehicle programs for the US Army.

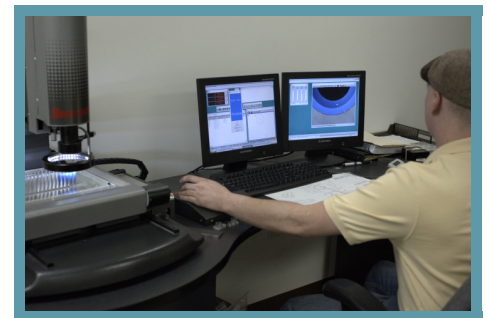

Robin's high quality capabilities have also been recognized by the military's gas mask suppliers, who have purchased critical rubber components that are integral to the proper performance of the breathing apparatus.

DESIGN CENTER NEWS

Robin has made major investments during the past year to streamline our manufacturing and provide more emphasis on our design capabilities. We now have R&D, material formulation and rapid prototyping all located under one roof at our facility in Berlin, Ohio.

We will continue to invest in this facility through the addition of people and equipment to enhance our position as a leader in the development of new materials and designs to assist our customers in leading edge applications.
