

HEALTHCARE NEWS

**VISIT US AT MD&M WEST,
BOOTH #1815**

The renovation and expansion of our Elasto-Tec Healthcare manufacturing facility continue to be on track for completion by April 2011. The transformation will include an expanded Class 8 Clean Room, dedicated assembly areas, and additional LSR / LIM production facilities.

CLEVELAND
MEDICAL
MART &
CONVENTION
CENTER

Where Medical Innovation,
Education & Commerce Meet

Robin Industries has signed a letter of intent to become a charter tenant in the new Cleveland Medical Mart. We anticipate that Cleveland will build on its reputation as one of the premier medical centers in the country and we plan to contribute to innovations in medical products that will emanate from this premier center of medical technology.

GOVERNMENT/DEFENSE NEWS

Robin Development Center has been asked to work with major defense contractors on next generation lightweight track pads for military vehicles. Robin is proud to assist with technology and innovation in the development of lighter and more durable vehicles for better sustainability in harsh conditions on the battlefield.

Additional equipment and capabilities have been added at both our Fredericksburg and Holmco manufacturing locations to better serve our government customers. New mills, transfer molding equipment and automated spray processes have been added to keep up with our growth in this key segment.

DESIGN CENTER & GLOBAL AUTOMOTIVE

Robin has always been known for our excellent in-house design and material development capabilities. In the coming year we will build on these attributes and focus on extremely rapid response times for our customers.

Our Robin Development Center in Berlin, OH is gearing up for this effort by purchasing additional mixing machines and adding to our rapid prototyping capabilities.

Our manufacturing division in Mexico has begun an expansion to meet our rapidly growing automotive and industrial businesses. The expansion, targeted for completion in April 2011, will double its manufacturing space and add more training and conference facilities.

Our Xiamen, China facility is also experiencing rapid growth as our business continues to grow in the automotive sector, and we anticipate the adding of capabilities to service industrial and medical customers in Asia. In addition to the manufacturing center in Xiamen, we will be adding to our staffing at our Sales and Engineering Center in Shanghai.
